News Release

Council of Canadian Academies to Undertake Studies Related to Medical Assistance in Dying

Ottawa (December 13, 2016) – The Council of Canadian Academies' (CCA) Board of Governors has approved a request by Minister of Health Jane Philpott and Minister of Justice and Attorney General of Canada Jody Wilson-Raybould, to undertake independent reviews related to medical assistance in dying.

The CCA will examine three particularly complex types of requests for medical assistance in dying that were identified for further review and study by the legislation passed by Parliament in 2016. These cases include requests by mature minors, advance requests, and requests where mental illness is the sole underlying medical condition. In undertaking these reviews, the CCA will compile and assess information and evidence to inform the ongoing policy discussion on the issues related to assistance in dying in these three circumstances.

The review process will begin with planning meetings to discuss the scope of the work resulting in a detailed study plan. This will be followed by the recruitment of panel members to conduct the reviews. As part of its independent expert panel process, the CCA will consider evidence from peer reviewed literature, international and national organizations, health care providers, stakeholders, and other groups. The CCA's Member Academies — the Royal Society of Canada, the Canadian Academy of Engineering, and the Canadian Academy of Health Sciences — will partner to provide key guidance and input throughout the assessment process, including study design, expert panel nominations, and dissemination processes. As with all CCA assessments, the final reports will undergo rigorous peer review and will be released to the public in both official languages. It is expected the reports will be finalized and released in late 2018.

Quote

"We are honoured to receive this request arising from the current legislation on medical assistance in dying from Ministers Philpott and Wilson-Raybould. We recognize that the three areas identified in the legislation involve sensitive and complex issues that would benefit from careful assessment. Together with our member academies, whose expertise is critical to the success of this work, we look forward to undertaking these reviews."

Eric M. Meslin, PhD, FCAHS – President and CEO, Council of Canadian Academies

Background

The CCA is a not-for-profit organization that undertakes independent, evidence-based expert panel assessments and workshops to inform public policy development in Canada. CCA projects are conducted by multidisciplinary, multi-sectoral panels of experts from across Canada and abroad. CCA reports provide evidence to inform decision-making processes rather than explicit recommendations. Established in 2005 with an initial grant from the Government of Canada, the CCA has become well known for its rigorous process and its comprehensive analyses of complex issues. The CCA was founded by three independent organizations that represent some of the finest minds in Canada – the Royal Society of Canada, the Canadian Academy of Engineering, and the Canadian Academy of Health Sciences. Their Fellows and senior decision-makers sit on CCA's Board of Governors and Scientific Advisory Committee, and they are a key source of membership for expert panels.
